

Peak Mileage Expenses, Case Study – Aquilant, HC21 UK – Kelly Uphill

Aquilant/HC21 UK Ltd is a distributor of medical devices in the UK. We have around 60 field-based drivers who each have a peak dongle and account to manage their business and personal mileage. Peak is linked with HMRC information which ensures that our drivers are HMRC compliant and as a business we are too.

We have been using Peak Mileage Expenses for about 5 years now. We have 60 drivers and so for them manually recording their miles and then having to maintain excel spreadsheets would be really time consuming from an administrative perspective, whereas we get a monthly automated report which provides everything we need to ensure people are deducted their personal mileage correctly in line with HMRC guidelines.

Our drivers find the system extremely easy to use, they literally just plug in and go. Our parent company were using a manual system and we transferred them to Peak this year and they can't believe how much easier it and time saving for them rather than how they were submitting manually previously.

We would absolutely recommend Peak to other businesses, if they were looking for an easy to use, online mileage tracking system, it's great.

Kelly Uphill, HR Business Partner at Aquilant, HC21 UK.
